***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-11, drawn to a method for identifying a compound for altering a protein activity.

Group II, claim(s) 12-14, drawn to a compound.

Group III, claim(s) 15-16, drawn to a method of treating.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

No special technical feature is found because Mandelkow (6,200,768) entitled "Method of Screening for Compounds that Dissolve Paired Helical Filaments" teaches in column 1 last paragraph bridging to column 2, abnormal phosphorylation is discussed. In column 2 lines 52-55 a kinase activity which specifically catalyzes the phosphorylation of tau protein and composition to inhibit it are shown. See Table 1 in column 44.

Therefore a lack of unity exists because there is no common technical feature found in the above Groups.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
